INTRODUCTION

"The correction of Textual Errors (Courteous Reader) is a work of time, and that hath taken wing. The more faults thou findest, the larger field is presented to thy humanity to practise in. Be indulgent in thy censure, and remember that Error, whether Manual or Mental, is an inheritance, descending upon us, from the first of our Race." Errata leaf in Francis Bacon's Of the Advancement and Proficiency of Learning. Oxford, 1640.

SCOPE

This index lists by author and subject English language articles in major professional economic journals published during the period 1886-1959. The use of geographical symbols makes it possible to locate easily all major empirical studies of principal geographical areas. The industry classification in 15.5 includes all major studies of each industry, whether concerned with prices, production, trade, labor conditions, etc.

Journals Included. The Committee has included those professional journals which it believes will be of widest use to teachers and scholars of economics. Government publications and some specialized journals are excluded. Journals indexed are listed on pages xvii-xx with bibliographical description. An alphabetical list of abbreviations used in citing the journals will be found on the inside front cover. An asterisk (*) indicates that coverage of English articles is selective. No articles in foreign languages are indexed.

The Publications of the American Economic Association 1886 to 1910 are not indexed herein because this series includes monographs as well as articles. An index to these Publications appeared in the American Economic Review Supplement, Volume 7, no. 4, December, 1917.

For the early part of the period covered by volume I of the Index many significant articles on economics appeared in more general journals not included, e.g., the Political Science Quarterly. For more detailed coverage of the literature during this period users are referred to the standard volumes on the history of economic thought, the Encyclopaedia of the Social Sciences, and the standard periodical indexes.

Scope of Each Index Volume. In each volume of the Index articles falling within the calendar years of the volume are included. When a volume of a journal overlaps two calendar years, e.g., October 1939-July 1940, articles are divided between the two Index volumes according to date. Where individual issues are not dated, they have been divided according to our best judgment. There is one exception to these principles: when successive parts of the same article fall in two Index volumes, the entire entry for both parts appears in each volume. Errata are listed only with the entry for the original article, regardless of date published.

COVERAGE OF MATERIAL

In this section the general rules for inclusion of material in all journals are set forth. In particular cases we have not hesitated to violate the rules where our judgment indicated this was desirable. In doubtful cases the decision usually has been in favor of inclusion rather than the contrary.

Material Indexed. The following have been included: articles whether signed or unsigned; comments, replies, rejoinders, and corrections of articles; papers at meetings of professional associations and discussion of such papers; reports of symposia, round tables, and similar group discussions; substantive reports of committees; signed notes and communications; signed editorials; obituaries containing biographical or bibliographical material whether signed or unsigned; special subject bibliographies; book reviews and notes about them only when not in a book review section.

Regular features appearing over a substantial period of time have been included if we judged them useful; when signed they have usually been included. Such features have been summarized in a single entry in the classified index and listed under the various authors or editors in the author index.

Material Not Indexed. Material not generally indexed includes abstracts of papers presented at professional meetings; abstracts of theses; book reviews and notes about them appearing in a book review section; unsigned notes and editorials; routine or administrative reports of committees; reports of proceedings of meetings; obituaries without biographical or bibliographical material; general bibliographies which are regular features. In addition, in the case of selective journals (indicated by * in the list of journals) we have excluded noneconomic material such as articles on politics, sociology, statistical theory, and population which are not of primary significance for economists.

ARRANGEMENT

Each volume of the Index is in two parts: 1) a classified index in which material is arranged by subject according to a classification scheme developed by the Committee in consultation with other experts; 2) an author index.

The author index is strictly a personal author file. All items which could not be assigned a personal entry are listed only in the classified index, under the heading "Anonymous." These include, in addition to unsigned items, articles signed with indefinite pseudonyms (e.g. "Mercator"; "A stockbroker"), and items for which a corporate body has been responsible. An item signed with initials which have been identified is entered under the author's name in both the classified and author indexes. Where the initials have not been identified, the item is listed only in the classified index under the surname initial. Arrangement of titles under each author is chronological in both the classified and author indexes.

Classified Index. In the classified index authors are usually listed alphabetically under each subclass. Anonymous entries are listed under the heading "Anonymous" which is interfiled in alphabetical place with authors' names. Articles of joint authorship are listed under the first-named author only. The names of joint authors are indicated up to three; for more than three, the name of the first author only is given, followed by "[and others]." Committee reports are listed only under the name of the chairman, where known. Comments on an article or discussions of a paper which follow it immediately are included in the entry for the article or paper. When a discussion covers two or more papers, it is listed separately under the name of the discussant and is not noted in the entry for each paper discussed.

There are two exceptions to the alphabetical author arrangement under each subclass: first, in subclass 4.8 - Individuals, where arrangement is alphabetical by the person who is the subject of the article, note, or obituary; second, in class 5 - Economic History, class 6 - General Contemporary Economic Conditions, Policy, and Planning, and some subdivisions of other classes where a geographical arrangement is used (see p. xv).

Author Index. In the author index titles are listed under each author in chronological order. For journals which do not use month of issue we have determined the chronological order arbitrarily within each year, listing all items with months first. The names of all joint authors of articles are included, each such article being listed under the name of each of its authors. Discussions are listed under the name of each discussant up to three; where there are more than three the discussion appears, if at all, under the first-named discussant only. Exception is made for discussions in the Papers and Proceedings of the American Economic Association, which generally have been fully indexed regardless of this rule. Anonymous articles and those signed with initials which have not been identified are not listed in the author index. Translators are not indexed, but are usually mentioned in the entry under the author's name.

Authors are listed in the author index of all volumes under the latest form of name when known. References are made from alternate or obsolete forms. (In the classified index the name follows the form which appears in the particular issue of the journal, in order to facilitate the location of the item.) The Library of Congress catalog has been the authority for form of name wherever possible. It has been our practice to make special search only for women's names, questionable forms (compound and prefix names and those with variant spellings), and names where the first forename was not available from the journals themselves. If the first forename was given, no search was made to establish the complete name.

Where authors were not identified in the Library of Congress or the Yale catalogs, other obvious reference books have sometimes been consulted. But we have by no means exhausted such sources. Many authors have not been identified; we have had to use our best judgment in determining the appropriate form for entry, consulting specialists on foreign names when possible. Full names are given only in the author index; in the classified index forename initials are used.

Alphabetizing of names follows general American library practice. Prefix names are arranged as if spelled as one word; names beginning with "M", "Mc," and "Mac" are interfiled as if spelled "Mac"; diacritical marks are ignored, e.g. Müller is filed as Muller, not as Mueller. We have solved the problem of variations in transliteration of Indian and similar names by interfiling them under one spelling without altering the entry itself. Where variant spellings have been used for the same author, we have chosen the spelling most frequently used in the journals or the latest spelling, when no other authority was available. We have followed the Western practice of entry under surname (or family name) with reference from forename where called for.

CONTENT AND FORM OF ENTRIES

Titles have been given exactly as in the journals except that obvious typographical errors have been corrected without transcribing the incorrect form. Occasionally, when titles have not indicated the subject of the article, we have inserted explanatory material in the classified index. In general, such insertion has been enclosed in brackets.

Review articles which were easily identified as such are indicated by the symbol "R." Obituaries are specified by "[obit.]." Notes and other types of material are not specified.

CLASSIFICATION SCHEDULE

The classification system consists of 23 main classes with a total of nearly 700 subclasses. It represents an amplification of the system used for classifying books and articles in the American Economic Review. The Committee developed the present system after many discussions and consultations with various specialists. It is the result of the adoption of certain principles based on our understanding of the past development and present status of the body of economic knowledge, tempered by our sense of the future. However, logical principles have been modified in the interest of usability of the Index, resulting in a classification which is in some respects a compromise between principle and practice. We cannot hope that users of the Index will find it ideal, nor can we hope that the decisions of the classifiers in individual cases will always be approved. In fact, during our prolonged discussions of the principles and practice of classification it became clear to members of the Committee that even experts in various aspects of economic knowledge cannot always reach agreement. In practice, the limitation of resources, particularly of human resources, often made it impracticable to employ experts or to delay too long in arriving at firm decisions in individual cases. The most that the Committee can hope is that the classified index will make more readily available to economists the wealth of material in the journals covered. We believe that users will generally be able to find what they want with the aid of various cross references, experience, and a certain amount of ingenuity.

The same classification system has been used throughout the five volumes. The change in the character of economics and in the nature of research is reflected in the changing number of items appearing in various subclasses.

The classification schedule, based on analysis of the materials for the whole period 1886-1959, is published in each volume of the Index on pages xxi-xlvi. Where there are no items in a given subclass for a given volume, the title of the subclass is omitted from the classified index in that volume but not from the classification schedule. In only two cases have the materials in various subclasses been consolidated because the amount of material in some volumes of the Index was small while in others it was so large as to require a more detailed breakdown: in 2.34 - Growth and Development Theory, where the amount of material is substantial only in recent years; and in 13 - War and Defense Economics, where the schedule was devised for the large amount of material in the 1940-49 volume.

Generally items have been classified once only. Where a group of items is relevant to more than one subclass, it has usually been placed in one, with a cross reference from the alternative subclass indicated in the classification schedule. However, 15 to 20 per cent of the items have been classified in two or, occasionally, three or more subclasses. In particular, major studies of individual industries or commodities have been listed in the appropriate subclasses of 15.5 or 16.01 and also under the appropriate function, such as international trade.

Serious problems arise in determining the place of items in the various subclasses. These problems are inherent in the structure of economic thinking and research. Differences of opinion and even errors are inevitable. Users of the Index are urged to take note of the cross references pro-

vided in the Classification Schedule, which should help to overcome many of the deficiencies of classification.

In each class or subclass which is further subdivided, the first subdivision is called "General." Into this goes all material which is relevant to the class or subclass but is not primarily related to a single subdivision thereof; thus, it includes not only material on two or more of the subdivisions but also more specific material for which special subdivisions have not been established. Consequently, a user interested in exhausting the material for any specific subdivision should look also at material in the "General" category of its class and subclasses. For example: material on the theory of building cycles might be found in all of the following subclasses: 2.335 - Building Cycles; 2.330 - General Cycle Theory; 2.30 - General Aggregative and Monetary Theory, Cycles, and Growth, and possibly in 2.0, the most general class under 2 - Economic Theory.

Although the classification schedule is largely self-explanatory, a brief statement of some classification principles governing the individual classes will help to orient the reader more quickly.

1. Scope and Method of Economics

This class includes general discussions of the scope and method of economics and of economic research. Subclass 1.3 - Teaching of Economics contains all material on the teaching of economics, including teaching in secondary schools, business schools, and other professional and technical schools. It does not include material on general professional training of businessmen, industrial relations experts, agricultural economists, or city and regional planners. All material concerning professional economic societies and journals and all general bibliographies are classified in 1.5 and 1.4, respectively.

2. Economic Theory, including Monetary Theory

All economic theory since 1870 except the theory of international trade, fiscal theory, and the theory of population has been included in class 2. It covers the major divisions of contemporary theory: value, price, and allocation theory; factors of production and distributive shares; aggregative theory, including the theory of money, cycles, and economic development and growth. The various subdivisions of class 2 have their empirical counterparts in other classes. Material relevant to certain topics, e.g. wages, may be found in two or more of the subclasses in the theory class and also in the applied class (19).

3. Economic Systems. Planning

This class is concerned with general discussions of alternative economic systems and of the role of government in economic life. Descriptions and analyses of specific economic systems such as the United States, Soviet Union, Fascist Italy, or Nazi Germany, will be found either in 5 - Economic History, or 6 - General Contemporary Economic Conditions, Policy, and Planning. Discussions of particular institutions or policies under various systems will be found in the appropriate functional class, e.g. cartels in Fascist Italy in the appropriate subclass of 15. However, all studies of cooperation and cooperative societies (except agricultural cooperatives) are classified in 3.4.

4. History of Economic Thought

Subclasses 4.0-4.7 for various periods or schools of thought include general discussions or those concerned with three or more individuals. All material on a single individual is classified under his name in 4.8, regardless of the period in which he lived or the school to which he belonged. Articles on two individuals appear under each name. Discussions of a particular theory of a period, school, or individual, and views on special topics are classified in 4. For the period since 1870 they are also listed under the appropriate subdivision of another class. An item written by a well-known economist and published posthumously in any of the journals has been classified in 4.8 along with articles about him if it is of interest for the history of economic thought. Such items are listed first under his name and usually do not appear in the author index except under the name of the editor if there is one.

It should also be noted that shifts in the chronology of the various volumes of the Index lead to variations in the inclusion of individuals in this class. For example, a discussion of John A. Hobson's theory of distribution published in 1904 will appear only in 2.20; a similar article written about Hobson today would appear also in 4.8.

All obituaries are included in this class, regardless of the place of the individual in economic science; however, except for obituaries, biographical and critical material in 4.8 is restricted to recognized economists; others are classified according to the fields of their activity, e.g. bankers in 9; businessmen in 14; labor leaders in 19.

The history of economic societies and journals is classified in 1.5.

5. Economic History

General articles on economic history and historical articles discussing three or more functions, e.g. production, prices, and trade, are included in 5. This class is subdivided by period and by country except that the ancient period (5.1) has no country breakdown.

Works that significantly overlap two periods are double-classed. Historical articles discussing one or two functions in the ancient or medieval period are double-classed in 5.1 or 5.2 and under the appropriate function. For the later periods, material discussing one or two functions is classified in the History subdivision of the appropriate functional class or classes, not in 5, e.g. "Prices and wages in Paris during the French Revolution" in 9.61 and 19.31.

The dividing line between historical and contemporary discussion has been determined arbitrarily. In general, only articles concerned primarily with a period 20 years or more earlier than the beginning date of the volume have been considered historical. Accordingly, the cut-off date varies for the volumes of the Index as follows:

Vol. I.	1886-1924	1865
Vol. II.	1925-1939	1910
Vol. III.	1940-1949	1918
Vol. IV.	1950-1954	1930
Vol. V.	1955-1959	1935

This pertains not only to material in 5.4 but also to material in the History subdivisions under each functional class. Articles dealing with both a historical and contemporary period, e.g. "the last hundred years," have been classified according to the emphasis and purpose of the author, e.g. in 5 or 6 or both.

The number of History subclasses in the functional classes varies with the amount of material. The digit 1 after the class number signifies historical material wherever this category is established (see below). The History subdivision under any class or subclass number includes articles on the historical aspect of any of its subdivisions. For example, 19.41 - Trade Union Organization. History includes historical material on any subdivision of 19.4, such as 19.44 - Union Security or 19.46 - Finances.

Below is a list of all the History classes and subclasses throughout the schedule:

20.1 CONSUMER ECONOMICS

21.1 HEALTH. EDUCATION. WELFARE

22.1 REGIONAL PLANNING AND DEVELOPMENT. HOUSING

6. General Contemporary Economic Conditions, Policy, and Planning

This class is restricted to general discussions of the contemporary economic situation, or of three or more functions. It is subdivided by country. Material on one or two functions is classified in the appropriate functional classes, e.g. wages and prices in England in 9 and 19. Discussions of general problems of underdeveloped areas are classified in 2.34 but discussions of specific underdeveloped countries, in 6.

7. Mathematical, Statistical, and Other Tools of Analysis

This class is restricted to methods and tools of analysis. In general, methodological articles in the statistical journals, where coverage has been selective, have been excluded. Only applications of methods to economic phenomena have been included from these journals.

8. Social Accounting. Statistical Data

Material on social accounting including national income and wealth, flow of funds, and input-output is classified here. The mathematical structure of input-output models is in 7.11. Much statistical data not elsewhere classified is also in class 8, including indexes of prices, production, or profit covering a sector of the economy, in contrast to those covering a single industry. Material on survey methods and the theory of index numbers is in 7.2.

9. Money, Credit, and Banking

This class covers empirical studies of money, credit, and banking as well as discussions of monetary and banking policy. Monetary theory is classified in 2.32.

10. Public Finances

All material on public finance and on general fiscal policy (excluding monetary policy) is classified in 10. Material on the theory of the effects of taxes on product prices is in 2.1338; on the welfare effects of tax and expenditure policies, in 2.163. Discussion of government procurement in war is classified in 13.21; of the administration of public enterprise, in 15.42 or the appropriate subdivision of 15.5-15.9.

11. International Economics

This class includes the theory of international trade and finance, empirical studies in the whole field of international economics, and all discussions of international trade and financial policies. The distinction between trade policy (11.23) and quantitative trade and exchange restrictions (11.34) has presented unusually difficult classification problems because of changes in the objectives of particular trade or exchange restrictions. This is especially true for the period since 1945.

12. Economic Fluctuations. Stabilization Policy

This class includes discussions of general economic fluctuations and of two or more instruments of stabilization policy. Discussions of a particular instrument for economic stabilization such as monetary policy or fiscal policy will be found in the appropriate class, e.g. 9 or 10. Stabilization in war or mobilization is classified in 13; general economic policy not concerned with stabilization, in 3 or 6.

13. War and Defense Economics

This class draws together material on the economics of the defense establishment and military operations, as well as material relating to economic mobilization and stabilization during periods of war, of rapid mobilization, and of demobilization. The line between material in 13 and that in other classes is necessarily arbitrary. During periods covering World Wars I and II this class has been used rather heavily. However, discussions of stabilization policy during the recent period of prolonged military expenditure incident to the cold war are not generally included in 13. In volumes II and V material in the various subclasses has been consolidated into fewer categories than indicated in the classification schedule because the amount of material is small. Articles covering a long period, a portion of which includes a war, are classified in 5 or 6 or an appropriate functional class, not in 13.

14. Business Organization. Managerial Economics

This class includes material on the business firm and its internal operations, including education for business in its various aspects.

15. Industrial Organization and Public Policy

This class is concerned primarily with the external relations of the business firm. 15.5 includes all the articles of major interest on individual industries (manufacturing, distributive, extractive, construction, and service). General studies of public enterprise are classified in 15.42 but studies of particular public enterprises will be found in the appropriate subdivision of 15.5-15.9.

16. Agriculture

This class includes articles relating to the production and initial distribution of agricultural products. The processing of agricultural products except milk is classified in 15.526 or 15.528. The economics of land (tenure, utilization, and policy) is classified in 17.3.

17. Natural Resources. Land Economics

This class is concerned with problems of basic natural resources and conservation. A distinction is made between the supply and utilization of natural resources in 17 and the cultivation or processing of the resources which is classified in 15 or 16. Forestry and fishing are classified in 17 as long as the processing does not go beyond the cutting and gathering of timber and the catching and unloading of fish.

18. Population

All articles on population have been included in full coverage journals, but in the selective journals only articles concerned with the theory of population and the relation of population to economic growth have been included. Persons interested in a fuller coverage of demographic material are referred to the Population Index, published at Princeton, N.J., by the Office of Population Research, Princeton University and Population Association of America, Inc.

19. Labor Economics

"Labor" in this class covers primarily the industrial labor force and its supervisory personnel. Material dealing with managers and executives is classified in 14.33; with sales personnel, in 14.56; with agricultural labor, in 16.3. Subclass 19.7 - Labor Legislation. Public Employees includes only general laws and legislation on labor and industrial relations. Laws on particular topics and the effect of a general law on a particular topic are classified with the topic, e.g. wage legislation, in 19.35, strike legislation, in 19.6, effect of Taft-Hartley law on the open shop, in 19.44.

20. Consumer Economics

This class includes primarily empirical and policy studies. The theory of consumer choice is classified in 2.11; of the consumption function, in 2.315. Consumer price indexes are classified in 8.54; consumer finance, in 9.8.

21. Health. Education. Welfare

This class draws together material on all kinds of social welfare programs, private and public. For convenience, material on all phases of Medical Economics and of the Economics of Education is classified in 21.7 and 21.8, respectively.

22. Regional Planning and Development. Housing

This class includes all studies of regional problems and planning, as well as the growing body of literature on the theory of regional science. "Region" is used here to denote a geographical area which is a part of a larger national area. It does not refer to regional blocs of nations. 22.5 - Housing includes all material on housing, housing markets, and housing policy, except for the construction industry which is classified in 15.55.

23. Unclassified

This class includes a small group of articles appearing in the full-coverage journals which could not be fitted appropriately into any category in the classification scheme.

TOPICAL INDEX TO THE CLASSIFICATION SCHEDULE

The topical index to the classification schedule (see pp. xlvii-lv at the end of the volume) is designed to assist users in locating major topics within the schedule. Included are all the topics which appear in the class or subclass headings; topics or concepts not appearing therein are generally not listed in the topical index.

GEOGRAPHICAL SYMBOLS

Alphabetical symbols appearing in the left-hand margin of the Classified Index indicate material relating to particular countries or other geographical areas. A table of these symbols appears on the first flyleaf. When two countries are discussed in the same article two symbols are given; for more than two a regional symbol is used, if any. Where the symbol is not sufficiently specific, the area covered is indicated in the title, enclosed in brackets.

In two classes, 5 - Economic History and 6 - General Contemporary Economic Conditions, Policy, and Planning, and in some subdivisions of other classes, entries are arranged geographically by the symbols in order to bring together material on the same area. The name of the country (United States) or continent (Europe, Asia, etc.) is used as a heading, preceding the articles relating to the area. The symbol appears in the margin opposite the first entry only for each geographical division and pertains to the following entries without repetition until a different symbol appears. When the same symbol applies to different areas, e.g. states of the United States which begin with the same letter, the entries are arranged alphabetically by the area covered and the symbol is repeated for each different area. An article pertaining to two areas is listed under each, unless they are contiguous. Subclasses employing a geographical arrangement are not necessarily the same in all volumes of the Index, since the amount of material in various subclasses varies considerably in different time periods. Readers are cautioned that the assignment of geographical symbols is not infallible, depending as it has on the judgment of individual classifiers as to the geographical significance of particular items.

ACKNOWLEDGMENTS

The Index was prepared under the auspices of the American Economic Association by a special committee appointed for this purpose. Financial support for the project was provided by the Ford Foundation and the American Economic Association. The Committee in charge is responsible for the general plan of the work and the classification scheme. The Chairman of the Committee and the staff were necessarily responsible for most of the detailed decisions.

The Committee is indebted to many for making the Index possible. We are particularly indebted to Mrs. Dorothy F. Livingston, Director of the project, who has played a major part from the early planning stage. Her ability to organize and her concern for detail together with her wide experience in library classification and bibliographical work have been invaluable. We are likewise deeply indebted to Mrs. Truus W. Koopmans, Chief of Classification, for her devoted and careful work in helping to develop the classification system and in supervising the classification of material.

Invaluable aid in solving problems of classification was given to the staff and Committee by Professors Charles H. Berry, Henry W. Broude, Tjalling C. Koopmans, Mark W. Leiserson, Jacob Marschak, Raymond P. Powell, and Robert Triffin of the Yale Department of Economics, and Professors Irving S. Fellows of the University of Connecticut and George G. Judge of the University of Illinois. Useful comments on the classification scheme were also received from Professors Otto H. Ehrlich of New York University and Bernard F. Haley of Stanford University. John Fall and Paul B. Kebabian of the New York Public Library contributed important bibliographic information and helpful advice on editorial matters.

Mrs. Koopmans was ably assisted in the classification of material by Thomas F. Wise and the following graduate students in economics at Yale: Shane Hunt, Robert W. Kilpatrick, Charlotte D. Phelps, Judith V. Reppy, Timothy E. Rice, and Edward J. Stevens, III. Devoted secretarial and clerical assistance was rendered by Barbara Alderman, Mrs. Elizabeth Baskin, Richard C. Carr, Mrs. Anne Granger, Mary McNulty, Mrs. Edith Owen, and Mrs. Frances Tarson. The prodigious task of proofreading was accomplished with meticulous care by Mary C. Withington, formerly Executive Secretary of the Yale University Library.

Our gratitude extends also to Miss Gertrude Tait, Executive Secretary of the American Economic Association, who was responsible for the many details of the project's fiscal affairs, and to Mrs. Louise S. Stevens, of the Irwin Editorial Staff, who supervised and largely performed the arduous feat of transforming the thousands of entries on individual paper slips into the finished pages which follow.

Finally, we are greatly indebted to Mr. James T. Babb, Librarian of Yale University, for providing convenient and pleasant working quarters for the project, and to Mr. John H. Ottemiller, Associate Librarian, for extensive advice on printing and for facilitating the use of the library's resources. Our obligation extends also to many other members of the library staff, in particular to Harry P. Harrison, Head of the Circulation Department, Robert J. Olson and Mrs. Marjorie T. Garber of the Reference Department, Elizabeth H. Butler, Regina A. McPartland and Mrs. Anne Whelpley of the processing departments, for exceptional service in expediting the collecting of journals as they were needed.
